**EVERY BRIEF COUNTS**  
AD NET ZERO

# SUSTAINABLE CONSUMER SEGMENTS ARE GROWING

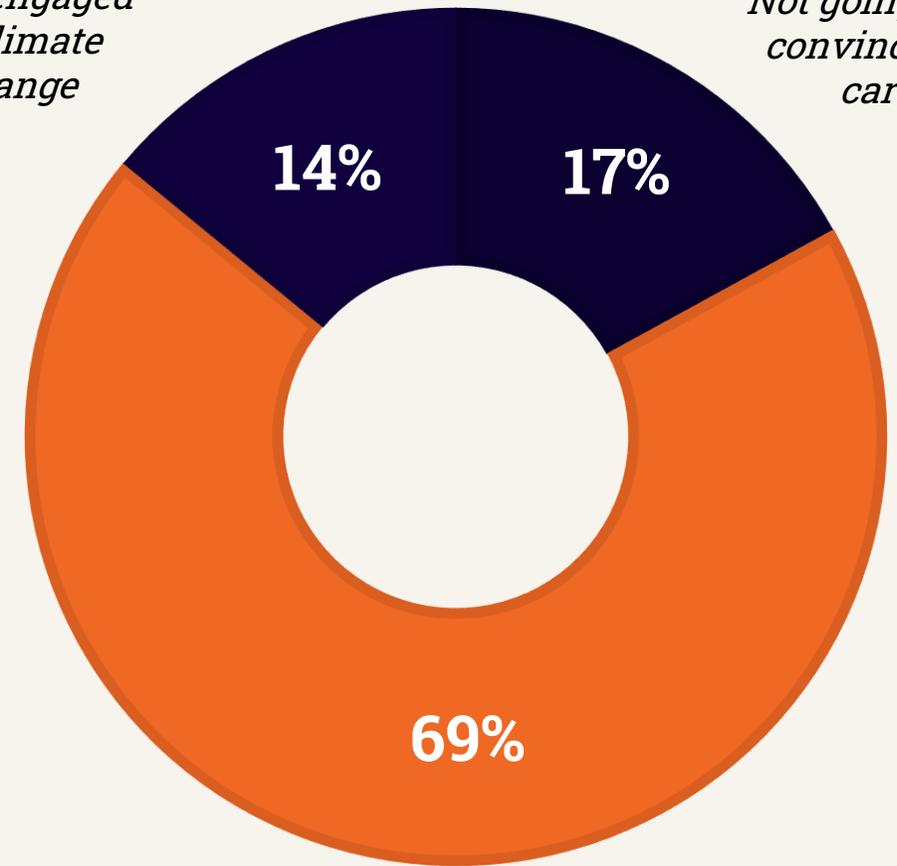

# 30%

growth in the active  
sustainable consumer  
segment by 2030

Source: 1. Kantar Worldpanel Data 2025 / 2. Media Bounty – Beyond the climate bubble

*Very engaged  
in climate  
change*

*Not going to be  
convinced to  
care*

*Believe climate change is  
happening and tend to agree that  
taking action will benefit them in  
the long term but not too engaged  
and don't think it's a priority*

# CONSUMERS WANT TO LIVE A MORE SUSTAINABLE LIFESTYLE

**85% agree**  
of consumers globally say  
they want to live a more  
sustainable lifestyle

# CONSUMER BENEFITS ARE DRIVING MORE SUSTAINABLE BEHAVIORS

Time saved,  
cheaper  
water bill

40%  
growth  
over 5 years

up to 150 billion  
gallons of water  
saved per year  
(with skip pre-wash, and  
dishwasher use)

“At [Procter & Gamble](#), we know brands have a responsibility to innovate to deliver irresistibly superior products and packaging that are more sustainable. Through our Cascade brand and many others, we’ve worked hard through our research, packaging, advertising, and partnership with digital creators to show how easy it can be to save water, waste and energy with products consumers use every day – because they are ‘made better, made to save’!”

Marc Pritchard

If you'd got that a few months ago the lake wouldn't have frozen over and you'd still have Leyla, Suzy and Amy 😂

7w Like Reply Share

Paul Edwards

That will be a real heat pump that supplies that building which is used by the crew and producers. It's part of their cost saving to enable the soap to continue.

The set is off grid or gas and that's cheaper than deliveries of LPG.

2w Like Reply Share

Hayley Hoose

Did you get your 7 thou grant off the government

# What happened?

- Understanding of the grant nearly doubled, rising from 24% to 42%.
- Twice as many viewers (66%) as non-viewers (32%) believe heat pumps are a credible heating option (Savanta survey).
- Viewers were twice as likely to consider installing a heat pump compared to non-viewers (62% vs 28%).
- 59% of viewers expressed intent to apply for the Boiler Upgrade Scheme grant.
- Google Trends data showed searches for “heat pumps” doubled on episode air dates.

*“If Dr Cavanagh wants to benefit from low-carbon heating, reduce his emissions and save around £100 on bills when using a smart tariff, then a heat pump is exactly what the doctor ordered!”*

**Miatta Fahnbulleh**

**Havas + ITV + EDF**

---

**Sunday Saver Challenge  
x Coronation Street**

# The background

Summarized from: [EDF Lights Up Coronation Street with Sunday Spark | LBBOnline](#)

- First of it's-kind-partnership between ITV and an energy supply (Britain's EDF).
- Ad places specially built EDF-themed orange house on ITV's television show *Coronation Street*.
- Focuses on **how its customers are leading change**, with EDF's 'Sunday Saver Challenge' (offers customers up to 16 hours of free electricity on Sundays for reducing their peak day usage during the week).
- Campaign builds on EDF's new '[Change Is In Our Power](#)' brand platform developed by [Lucky Generals](#) and launched in 2024.

• CORONATION ST. •

# The details

Summarized from: [EDF Lights Up Coronation Street with Sunday Spark | LBBOnline](#)

- EDF content aired before, during and after '*Coronation Street*' episodes across ITV's platforms for a **seamless multichannel experience** from ad break and episode, to catch-up and social.
- The partnership ran for six weeks across TV, BVOD, digital and OOH, as well as EDF and ITV's social channels.
- As founding participants in Ad Net Zero's Every Brief Counts pilot, Havas Media UK and ITV are embedding sustainable behaviours into content.
- This also contributes to the commitments of the Climate Content Pledge, of which ITV is a signatory.

# Beyond the message to the media

Summarized from: [EDF Lights Up Coronation Street with Sunday Spark | LBBOnline](#)

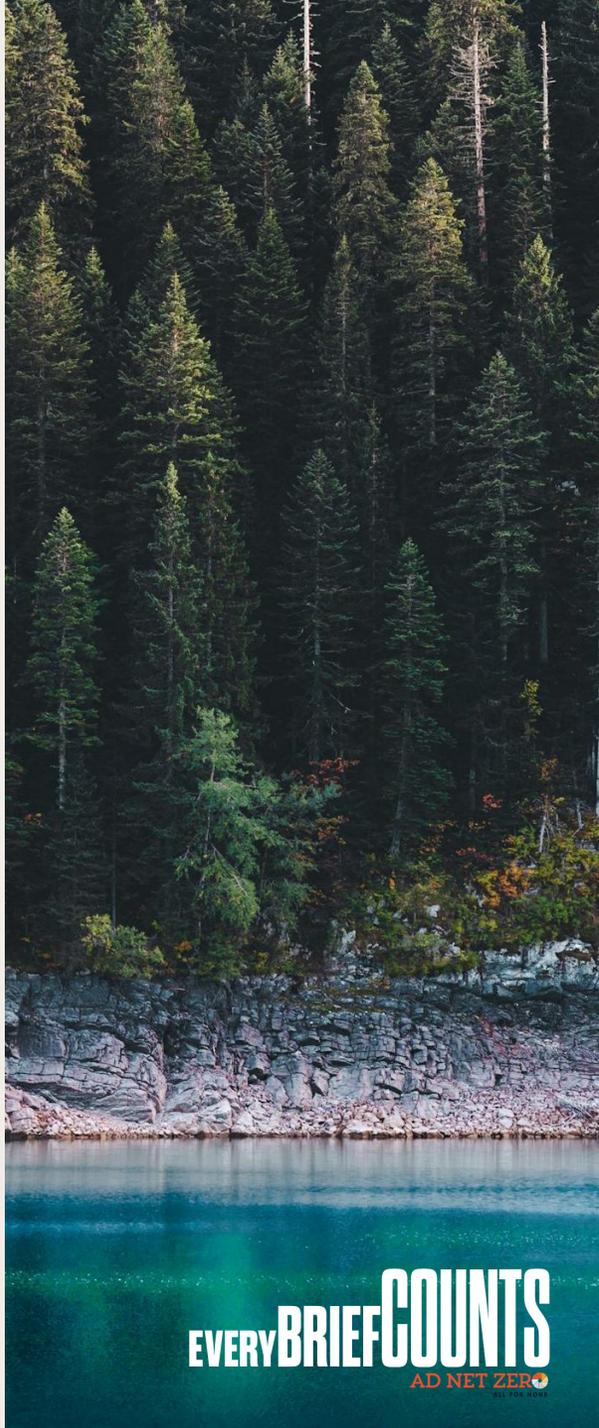

- EDF has doubled its investment into Havas Media Network's **Sustainable Market Place** and used Havas' Carbon Calculator to **measure media emissions**.
- EDF is also partnering with Jolt's carbon-negative EV charging network in London and **powering DOOH with clean energy**.
- Meanwhile, their campaigns also tap into **sustainable targeting** across DAX, Spotify, Acast (e.g., Climate Curious podcast), and AudioXi, further aligning EDF with climate-conscious audiences.

## ADVERTISING INDUSTRY SUSTAINABLE PRODUCTION TRAVEL CASEBOOK

Best Practices in Advancing Business Value through Pursuing Carbon Emissions Reductions from Travel

**Plane Type & Seat**

Larger seats take up more space – meaning each passenger accounts for a bigger share of the plane’s fuel burn, not to mention, more amenities = more waste.

- **Private Jets:** 10-20x more emissions than commercial flights.
- **First Class:** 4-6x more emissions than economy flights.
- **Business Class:** 3-4x more emissions than economy flights.<sup>1</sup>

**Route & Frequency**

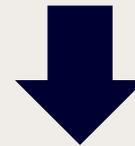

Fuller planes = fewer emissions per passenger. Opt for direct routes, higher occupancy flights, and modern aircraft. Combine trips, use virtual options, and prioritize essential travel only whenever possible.

Did you know? Flying **4 fewer people** cross-country to a production shoot can save about 5.4 metric tonnes of CO<sub>2</sub>e – **equivalent to the annual electricity use of one U.S. household.**<sup>2</sup>

**Cost Savings & Morale**

Reducing unnecessary travel saves money and supports sustainability goals without sacrificing quality. Many companies now maintain travel budgets around 20% lower than pre-COVID levels, while lowering their footprint through hybrid meetings and smarter trip planning.<sup>3</sup>

**Tip? Make it relatable!** Framing travel choices in simple terms – “class, route, and frequency” – helps employees understand their personal impact.

Best Practice 01: Incorporate air travel reduction into company policy.

## McCann Worldgroup

McCANN  
WORLDGROUP

### Business Travel Emissions Reduction Overview

- **68% reduction** in business travel emissions (1H 2024 vs 2019 baseline)
- **60% reduction** vs 2023
- Supported by a **company-wide green travel policy** and a **sustainable production manifesto** (annual carbon budgets set per office)

### Key Actions:

- Sustainability Lead partnered with COO, senior leaders, and office champions
- Embedded in **creative development** and **team KPIs** (carbon budgets reviewed alongside financial metrics)
- **Green travel policy:**
  - Economy class required for flights under 6 hours
  - Limited attendees at shoots
  - Policy shared with teams and clients

### Results:

- **Business class flights** reduced to 11% of total (down from 27% in 2023)
- **Internal summits** reorganized into smaller, regional hubs to cut travel emissions
- **Project Bright Green** (with TfL): Saves 2.5M kWh annually, reducing carbon emissions

### Key Learnings:

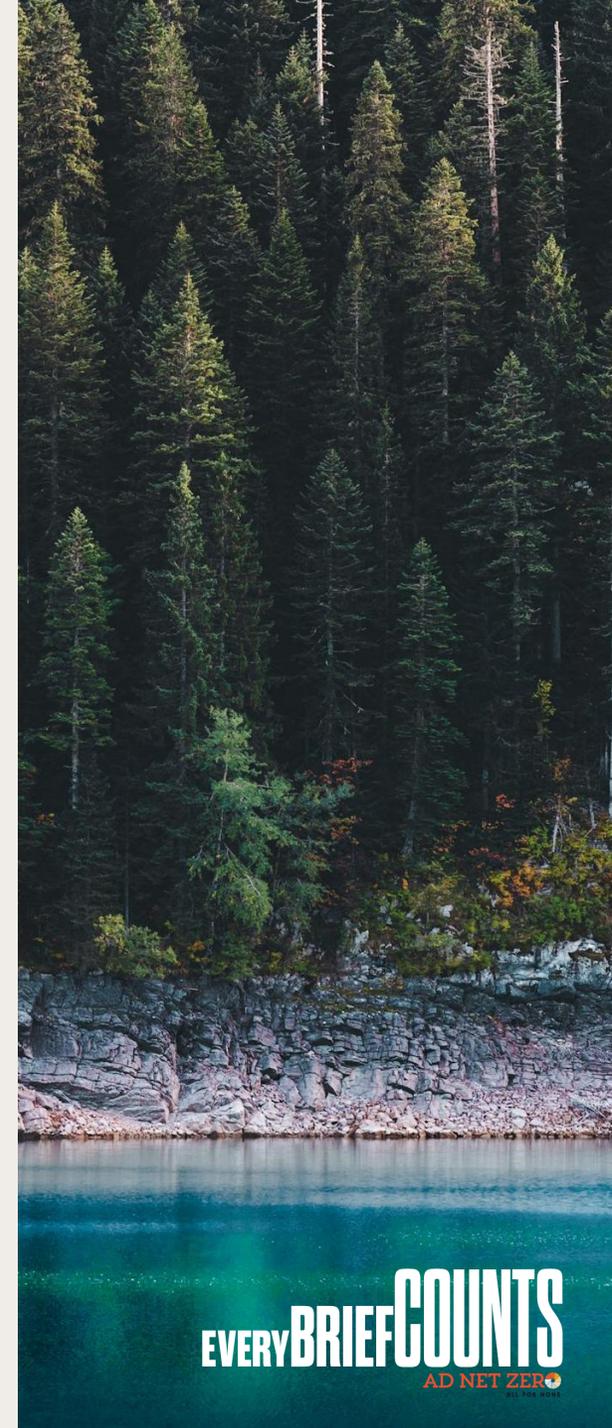

- Align carbon goals with financial goals for stronger buy-in
- Leadership and local champion involvement critical
- Regular tracking and enforcement of travel policy essential for sustained reduction

**SUSTAINABLE PRODUCTION TRAVEL GUIDE**

# APPENDIX

---

## 2) Notable ads & examples from entertainment

# Other examples of normalizing sustainable behaviors in ads

explicit

**(US) Hellman's "Make Taste Not Waste"** – focuses on avoiding food waste for monetary reasons, but normalizes talking about food waste

implicit

**(UK) eBay & Love Island 2022-2025 seasons** –360-degree campaign, encompassing on-screen integration and off-screen activations. 2025 coincided with New Year, associated with fresh start and wardrobe clear-outs.

explicit

**(UK) Barbour apparel** – brand promotes slow fashion, longevity and ownership of products vs. consumption.

implicit

**(US) Redwing "Will your Wings"** - Labels in shoes promote longevity, quality, and legacy – and normalizes circularity, ownership vs. consumerism, slow fashion.

explicit

**(US) Chobani Oat** – agency redefined "oat milk is for hippies" stereotype.

implicit

**(US) OLiPOP** – Agency intentionally featured electric vehicle in a spot.

# Ad Net Zero Compendium of 120 Cannes Lions sustainability-related entries

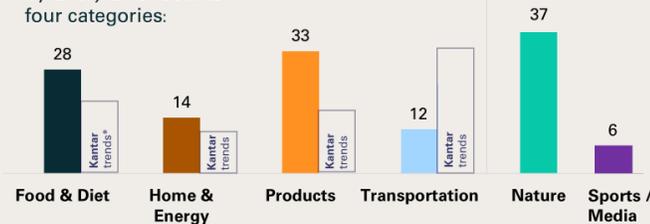

↓  
**2025 Compendium**

## What we noticed

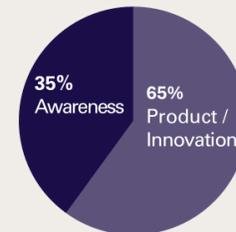

### Type of sustainable behaviour / theme

# of Campaigns by Every Brief Counts four categories:

\*See slides 9-11 for Kantar data

### Types of messaging

100% of the campaigns we noted featured an **explicitly sustainable message**.

**Implicit behaviours** are a massive opportunity.

### Was the work deemed more effective?

Possibly, but review might have unintentionally contained more award-winning campaigns, due to ordering in LoveTheWork.

Most awarded campaigns were those featuring **Social Impact, Nature, and Transportation**.

**Gold**  
6% winners

(vs. Gold 2% avg)

**Silver**  
13% winners

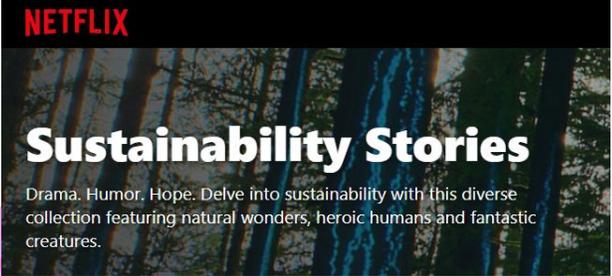

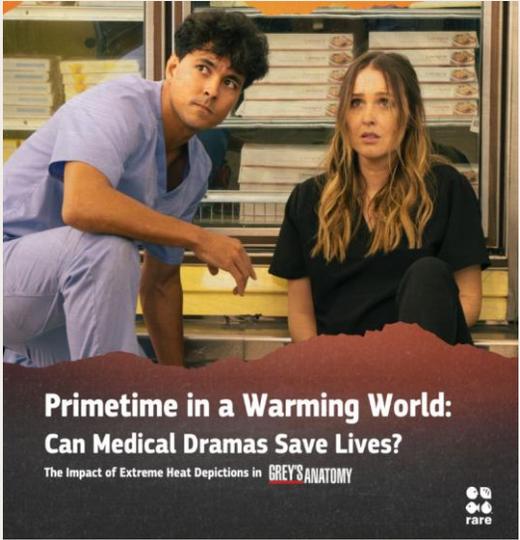

(vs. Silver 4% avg)

**Bronze**  
19% winners

(vs. Bronze 6% avg)

# Collaboration with film & entertainment, where climate storytelling has become commonplace

DIET

# DIET

**Roughly one third of the world's food is wasted (1.3 billion tons annually)<sup>1</sup>; 70% of waste comes from households.<sup>2</sup>**

**Food waste amounts to about 10% of global emissions.**

**Low meat diets produce half as much heat-trapping gas and half as much water pollution vs meat-rich diets.<sup>2</sup>**

The high-level behavior	What does this look like in advertising?	GHG emission reduction potential*	Source(s)
<b>Shift to more plant-based food</b>	Featuring food, either in the background or being consumed? Consider showing plant-based options (vegan, vegetarian), people preparing and cooking these foods together, or researching recipes, meal plans or restaurants.	Very High	<a href="#">Plant Rich Diets</a>
<b>Reduce food waste and focus on mindful consumption</b>	Featuring food, either in the background or being consumed? Consider ways to show mindful consumption and avoid abundance and waste. Show individuals planning out meals or grocery trips, taking care to prepare their own food, storing food properly for maximum life, etc.	Very High	<a href="#">Reduced Food Waste</a>
<b>Manage food waste and leftovers</b>	Featuring food, either in the background or being consumed? Consider ways to show mindful management of food waste. Show individuals composting in their kitchen or yard, taking care to prepare their own food or package up leftovers, storing food properly for maximum life, etc.	Consumer food waste loss - High  Composting - Low	<a href="#">Waste Management UN Environment Programme</a>  <a href="#">Composting</a>
<b>Shift to more organic, local and seasonal products</b>	Featuring food, either in the background or being consumed? Consider showing people tending or planning a garden or purchasing organically-grown foods, or portraying regenerative low-energy and low-pesticide farming.	Organic and regenerative farming - High	<a href="#">Emissions due to Agriculture</a> <a href="#">Greenhouse Gas Emissions</a> <a href="#">Food Carbon Footprint</a>
<b>Shift to lower carbon white meats</b>	Featuring food, either in the background or being consumed? If showing meat options, consider showing a generally lower carbon meat such as chicken. Note: while the data varies widely based on situation (method of farming, region, engineered, etc.) white meat generally has a lower carbon footprint.	Medium	<a href="#">Our World in Data</a> <a href="#">Dietary Substitutions</a> <a href="#">Chicken Over Beef</a>

\*GHG Emissions Reduction Potential is estimated from scientific sources listed and takes into consideration the magnitude of the change (emissions per activity).

# HOME & ENERGY

**14% of UK emissions<sup>1</sup>  
and 20% of US  
emissions come from  
home energy use.<sup>2</sup>**

**If considered a country,  
these amount to the  
world's sixth largest GHG  
emitter, larger than  
Germany.<sup>3</sup>**

**The carbon footprint  
of rooftop solar  
panels are c.12 times  
lower than using  
natural gas<sup>2</sup>**

The high-level behavior	What does this look like in advertising?	GHG Emission Reduction Potential*	Source(s)
<b>Prioritize renewable electricity</b>	Showing any use of electricity, either in home or out? Consider showing roof-top solar panels, consumers joining communal or local renewable energy projects, wind turbines in a community, etc.	Solar – Very High  Solar hot water heaters – Medium	<a href="#">Distributed Solar Photovoltaics</a>  <a href="#">Solar Hot Water</a>
<b>Shift to energy efficient cooking equipment</b>	Featuring people cooking? Consider showing people using lower emitting cooking appliances such as induction/electric cooktops, and smaller items like pressure cookers, microwaves and air fryers when appropriate.	Induction Cooktops – Very High (especially if switching from non-clean energy sources) Smaller cooking equipment – Low	<a href="#">Clean Cooking Home Cooking Methods</a> <a href="#">Carbon Footprint of Cooking</a>
<b>Consider efficient living spaces</b>	Showing any home scenes? Consider showing people in spaces appropriate for the number of people, urban, high density housing such multi-unit housing/apartments, more residents in home to reduce per capita space, or even renting out extra rooms in a house)	High	<a href="#">Buildings</a> <a href="#">PNAS</a>
<b>Reduce energy usage: Refurbishment and renovation, insulation</b>	Showing any kind of building or home? Consider showing LED light bulbs, images that show efforts to ensure good insulation for things such as doors, windows, attic, hot water pipes, etc.	LED – High  Insulation – High	<a href="#">LED Lighting</a>  <a href="#">Insulation</a>
<b>Reduce energy usage: Appliance usage</b>	Showing appliance usage? Consider showing unused appliances unplugged, managing temperature on refrigerators, the use of multi-functional appliances and the rental of infrequently used appliances.	Refrigerant management – High  Laundry appliance management – Medium	<a href="#">Refrigerant Management</a>  <a href="#">Residential Laundry</a>
<b>Shift to heat pumps</b>	Showing any in home heating? Consider showing heat pumps (in the background, installation, etc.)	Medium	<a href="#">High-efficiency Heat Pumps</a>
<b>Reduce energy usage: Adjust room temperature</b>	Showing any scenes with an opportunity to promote lower room temperature? Consider showing curtains and blinds pulled during summer and air-con turned down where possible, smart thermostats, insulated windows, etc.	Adjustment of 2 – 5 °C – Medium  Adjustment of less than 2 °C – Low	<a href="#">Carbon Footprint Calculator</a>

\*GHG Emissions Reduction Potential is estimated from scientific sources listed and takes into consideration the magnitude of the change (emissions per activity).

# PRODUCTS & PURCHASES

There is enough clothing on the planet to dress the **next six generations** of people.<sup>1</sup>

By doubling global **circularity** (c.7-8%), we could reduce global emissions by **39% by 2032.**<sup>2</sup>

The high-level behavior	What does this look like in advertising?	GHG Emission Reduction Potential*	Source(s)
<b>Buy pre-loved clothing</b>	Featuring any interaction with clothing? Consider showing pre-loved items, including rented outfits, clothing swaps and sharing clothing with friends.	High	<a href="#">Reuse Business Models in Apparel</a>
<b>Prioritize less packaging / materials</b>	Featuring packaging of any kind? Consider showing refillable products, shopping at refill stores, opting into items with consolidated or bulk shipments, more efficient packaging (e.g., no extraneous display packaging, frustration-free packaging) and re-usable boxes/larger containers.	Medium	<a href="#">Reduced Plastics</a>
<b>Think circular and long lasting products</b>	Featuring the consumption of products? Consider showing conscious consumption, such as the use of repurposed, repaired or circular items.	Medium	<a href="#">CAST</a>
<b>Promote effective recycling</b>	Featuring any packaging that could be recycled? Consider showing individuals recycling with proper methods - rinsing out plastics/glass/metals, sorting at home in bins or bringing to a recycling facility.	Recycling, general - Medium Recycling metals - Medium Recycling paper - Low Recycling plastics - Low	<a href="#">Recycling</a> <a href="#">Recycled Metals</a> <a href="#">Recycled Paper</a> <a href="#">Carbon Waste and Resources Metric</a>

\*GHG Emissions Reduction Potential is estimated from scientific sources listed and takes into consideration the magnitude of the change (emissions per activity).

# TRANSPORT

**Average CO2 Emission (Round Trip per Person) for trains are 96.5% less than for planes<sup>1</sup>.**

**Life cycle emissions for EU electric cars are 3x lower than for petrol cars<sup>2</sup>**

The high-level behavior	What could this look like in advertising?	GHG Emission Reduction Potential*	Source(s)
<p><b>Take the lowest carbon emitting form of transport possible for the trip</b></p>	<p>Featuring travel? Consider showing consumers making active choices to take the lowest emitting form of transport possible. This could include walking or cycling if possible, or if not, then taking public transport or using a battery electric vehicle or carpooling. For longer distances, consider showing the use of electric or diesel trains, with flying used when necessary.</p>	<p>Public transport – High                      Flight reduction – High                      Battery electric vehicle – Medium                      (Non-plug in Hybrid – Low)                      Carpooling – Medium                      Walking – Lower scalability                      Biking – Lower scalability                      E-Bikes – Lower scalability</p>	<p><a href="#">Public Transit</a>  <a href="#">CAST</a>  <a href="#">Electric Cars</a>  <a href="#">Hybrid Cars</a>  <a href="#">Carpooling</a>  <a href="#">Bicycle Infrastructure</a>  <a href="#">Electric Bicycles</a></p>
<p><b>Support hybrid working</b></p>	<p>Featuring corporate working? Consider showing business meetings as hybrid with some virtual presence or home office settings. Note: this minimizes travel and also encourages better diet practices and can reduce food waste.</p>	<p>Low</p>	<p><a href="#">Telepresence</a></p>

\*GHG Emissions Reduction Potential is estimated from scientific sources listed and takes into consideration the magnitude of the change (emissions per activity).
